1. It is estimated in Appendix C that approximately 8,000 cu. ft. of records will be transferred to the Records Center annually. On the basis of this estimate, the above figures indicate that the Center will be filled to capacity in about 5 years and at that time expansion will be necessary. Although the volume of records to be retired will continue at the rate shown above, the volume of inactive records to be housed will accumulate at a somewhat reduced rate after the first few years of operation. This will be accomplished through the development and application of Records Control Schedules under which a portion of such records can be destroyed upon the expiration of established retention periods approved by officials of the responsible offices.
2. Records Center capacity is assumed to be in the ratio of 2 cu. ft. of records for every 1 sq. ft. of available floor space. This is a minimum figure established by the GSA in the operation of ten Federal Records Centers. It takes into consideration the space needs for aisles and offices.
3. Includes an estimated \$405,000 for construction and the cost of the storage equipment for the accretions of each year.
4. In computing the saving, the salaries of Records Center operating personnel are not accounted for because this cost will be more than offset by the savings in the salaries of office personnel, i.e. more time is required to maintain and service inactive records in office space than is required when the records are stored in a Records Center.
